TT = total number of tranches intended to be procured in the auction

LC = load cap, which is 75% of TT (rounded down to the nearest integer if necessary)

Tranches are based on historical load data, and assumed tranche sizes of approximately 50 MW/tranche for Residential and Commercial products, and 100 MW/tranche for Industrial products

% of DS Load is # Tranches divided by the total number of tranches to be procured across auctions for the given company, customer class, and delivery period
